

1. Harsha Thulasi
2. I spent around 6-7 hours on this assignment.
3. Most of it seems pretty obvious now that I finished it but the steps in the "Lab8.ipynb" are a little confusing. Some of the steps mention creating data frames but the way I did it was connecting the read and write streams together. The read and write stream themselves are not data frames so I spent trying to understand that. The parquet was also a little time consuming to figure out. I was trying to read from a data frame but after a while I just read the data from the read stream.
